

Market Monitoring Agent – FSC Data Model & Architecture

Agentforce Fine Tuners - Financial Services Cloud - May 2026

Challenge Overview

Vikram is a Relationship Manager (RM) for the mass affluent wealth segment in Mumbai, managing **450 client relationships** across the western region. His clients rely on his proactive market recommendations to manage their wealth. To stay effective while on the go, Vikram needs his CRM to act as an intelligent co-pilot on his mobile device — allowing him to research, segment, and advise his entire portfolio at scale.

This solution builds an **AI-driven Market Monitoring Agent** using Agentforce to automate market research, hyper-segment impacted clients, and enable one-tap personalized communication so Vikram can deliver elite advisory services from anywhere.

Current Pain Points

- Research Overload:** Market analysis requires manual effort across multiple fragmented data sources, making real-time advice impossible.
- Manual Outreach:** Sending personalized communications to 450 clients is a manual, error-prone process rarely performed in real time.
- Information Silos:** Client data (family, work, demographics) is scattered across systems — Vikram often lacks a full 360° view before a call.
- Collaboration Gaps:** Delaying with research and back-office teams is slow. In critical financial situations, these lags erode client trust.

Mission

- Real-Time Segmentation:** Use Data Cloud to instantly identify which specific clients (e.g. 63 of 450) are impacted by a market event.
- AI-Generated Advisory:** Use Agentforce to generate personalized market insight messages, reducing hours spent on manual drafting.
- Channel Preference:** Capture and use each client's preferred channel (WhatsApp, email, or SMS) for all automated communications.
- 360° Pre-Call Brief:** Summarize a client's account, family milestones, and recent work history in a single view before every call.
- Automated Activity Logging:** Auto-log every client response and RM activity back into the CRM — no manual data entry.
- Slack Collaboration:** Enable Vikram to query internal research teams or trigger approval workflows for custom trades via a Slack Agent.

Key Scenarios Built

- Market event created → Data Cloud segments impacted clients by portfolio holdings in real time.
- Agent generates hyper-personalized advisory message per client using Agentforce LLM action.
- Message dispatched via WhatsApp / Email / SMS based on Preferred_Channel__c field.
- Pre-Call Brief triggered by RM on mobile — returns 360° summary from FSC objects.
- Slack agent surfaces research reviews. RM marks them reviewed with one tap.
- All interactions auto-logged as FSC Tasks/Activities against the client record.

Tableau Dashboard – Market Impact Intelligence

The **Tableau Dashboard** provides Vikram with a real-time visual intelligence layer embedded in the solution. At a glance, the RM can see all **clients in the system**, exactly which ones are impacted by each market event, which financial securities carry the highest portfolio exposure, and how much market value is at risk — turning raw Salesforce data into actionable **Next Best Action** decisions.

Chart 1 - Client × Market Event Impact Heatmap

Chart 2 - Financial Security – Total Market Value at Risk

What the RM sees: Each row is a client and each column is a market event (IT Sector Correction, RBI Rate Policy Impact on Banks, US-Iran War, US-Israel-Iran). The colour intensity — light to dark purple — represents the **total market value exposed**. Darker squares flag clients with the highest portfolio value at risk.

Vikram can instantly identify high-exposure clients such as **Pooja Desai** and **Neha Nair** holding large positions in impacted securities, and **prioritize outreach accordingly** before the market opens.

How the Tableau Dashboard Drives Next Best Action

- Cross-referencing the heatmap with any market event to identify the **highest-impact client cohort** in seconds — no manual filtering needed.
- Use the security bar chart to determine which **mutual funds require urgent advisory messaging** based on total portfolio exposure across all clients.
- Combine shifts over time to trigger **bulk personalised communications** via WhatsApp, Email, or SMS through Agentforce to the right clients at the right time.
- Track shifts over time as major market events are created, enabling **continuous, proactive portfolio monitoring** without any manual analysis.

What the RM sees: A ranked bar chart of all financial securities by aggregate market value held across clients. **ICI Prudential Bluechip (₹16.9M)**, **HFDC Top 100 Fund (₹13.7M)**, and **Axis Bluechip Fund (₹10.9M)** top the risk ladder.

When a market event impacts a sector, Vikram immediately identifies which securities carry the **highest aggregate risk** — informing advisory prioritization and triggering bulk personalised communication campaigns to the right clients.

Technologies Used & Completed Requirements

All **mandatory** and **additional** technical requirements for the Market Monitoring Agent challenge have been fully implemented and demonstrated in this solution.

Financial Services Cloud Mandatory ✓	Agentforce Mandatory ✓	Data Cloud Mandatory ✓	WhatsApp Additional ✓
✓ Wealth portfolio managed via FinancialAccount & FinancialAccountParty	✓ Autonomous Market Monitoring Agent built and deployed	✓ Real-time client segmentation based on portfolio holdings vs market event	✓ Initiated WhatsAppService dispatches AI-generated messages via WhatsApp API
✓ Household relationships modelled with Person Account	✓ Create Market Event action with LightningType form input	✓ DataCloud/QueryUI executes SOQL against Data Cloud DMO objects	✓ Channel routing logic reads Preferred_Channel__c from Account
✓ Financial Goals tracked via FinancialGoal & FinancialGoalParty	✓ Get Impacted Clients action queries Data Cloud in real time	✓ 63 of 450 impacted clients identified instantly by asset class & sector	✓ Personalized advisory message delivered to client mobile in one tap
✓ Assets & securities linked via Asset, PartyFinancialAsset, FinancialSecurity	✓ Generate Market Impact Message action uses LLM for personalized advisory	✓ Unified client profile harmonised from FSC + transaction data	
✓ Life events captured via PersonLifeEvent for 360° client brief	✓ Pre-Call Brief action returns 360° client summary on demand		
✓ Client tasks & activity logs auto-created on every RM action	✓ Invoke Apex actions for all agent logins		

Slack Integration Additional ✓	Tableau Additional ✓	Email & SMS (Twilio) Additional ✓
✓ Slack Agent surfaces internal research reviews to Vikram	✓ Client × Market Event heatmap — colour-coded by total portfolio market value exposed	✓ EmailService sends personalized advisory via Salesforce Email
✓ Action fetches unread research posts	✓ Financial Security bar chart ranks all securities by aggregate market value at risk	✓ TwilioSMSService dispatches SMS for clients preferring text channel
✓ RM can mark research as reviewed with a single action	✓ Real-time view of all clients in system and which are impacted per market event	✓ All three channels (WhatsApp / Email / SMS) fully implemented
✓ Triggers approval workflows for custom trade requests for approval workflow slack channel	✓ Enables RM to identify Next Best Action: which clients to contact first and which funds to address	✓ Channel selected automatically based on client preference field

ALL REQUIREMENTS STATUS

✓ FSC ✓ Agentforce ✓ Data Cloud ✓ WhatsApp ✓ Slack Integration ✓ Tableau ✓ Email ✓ SMS
